AMEGA recorders, reproducers, interlock and audio equipment have been "tooled" for manufacture resulting in better performance, lower maintenance, interchangeable parts, and better value. The modular concept is used throughout the entire sound system for flexibility.

The extraordinary AMEGA interchangeable silicone transistor module was designed for world wide communications. It is used in all AMEGA recorders, mixers, reproducers and amplifiers. These components are available for the standardization of the complete studio sound system. Many studios have refitted their recorder and reproducer transports with AMEGA low impedance heads and module amplifier components.

The modern developments from AMEGA research, plus production know-how makes it possible to supply the most up-to-date quality equipment at sensible prices.

- AUDIO - SOLID STATE
PLUG-IN INTERCHANGE-
ABLE MODULES.
- SINGLE SYSTEM - SOUND
SYSTEMS.
- MULTI-CHANNEL -
SYSTEMS AND AUDIO.
